Opportunities Matter: Exploring Youth’s Perspectives on Their Long-Term Participation in an Urban 4-H Youth Development Program [Article 090403FA001]
Ferrari, Theresa M.; Lekies, Kristi S.; Arnett, Nate
This article highlights a study which explored youths’ perspectives on their long-term involvement at Adventure Central, a comprehensive 4-H youth development program based at an urban park facility. We conducted four focus groups with 16 youth between the ages of 12 and 16 who had participated in the program between three and seven years. The youth experienced a wide range of opportunities including nature-related activities, jobs at park facilities, and travel. They spoke positively of their experiences and described how they benefited from their participation. Novelty, challenge, and leadership were key features of these opportunities. The youth noted the connection between learning and fun. In the process, they learned new skills, such as teamwork and public speaking, and developed personal qualities, such as responsibility, that helped them as they were growing up, transferred to other settings, and would benefit them in the future. Findings from this study suggest some clear implications for youth development professionals.

Afterschool Programs in America: Origins, Growth, Popularity, and Politics [Article 090403FA002]
Mahoney, Joseph L.; Parente, Maria E.; Zigler, Edward F.
The historical and recent growth of afterschool program (ASPs) in the U.S. is discussed in this article. Particular attention is given to the recent history of social and political influences that have led to growth and current popularity of ASPs. The article begins by reviewing changes in schooling and the labor force that created a supervision gap between the school day of children and work day of parents. This gap contributed to the need for afterschool child care. Next, influences leading to a growing recognition of the significance of school-age childcare for working families and their children, including research on the potential risks of self care and benefits of well-designed ASPs, are described. These discussions are contextualized alongside decades of social and political action and debate over the development of and funding for ASPs in America. Several key factors likely to affect after-school programming in the near future are discussed.

The Virginia Abstinence Education Initiative Evaluation Structure: A Lesson in How to Successfully Overcome the Challenges of Multi-Site Program Evaluation [Article 090403FA003]
Lewis, Allen; Brubaker, Sarah Jane; Karph Ariane S.; Ambrose, Brian
This discussion provides an overview of the evaluation process of the Virginia Abstinence Education Initiative (VAEI). It details the basic principles that premise the evaluation structure. The evaluation structure utilized by the VAEI is an intentional one, designed to provide the most rigorous approach possible in order to have maximum confidence in the quality of the data produced by this statewide, multi-year effort. The authors argue that this type of informed
approach grounded in a high degree of evaluation rigor can help to overcome the challenges typically associated with multi-site program evaluation.

**A New System of Classifying Out-of-School Time Job Responsibilities**  
*Buher Kane, Jennifer; Peter, Nancy*

Out-of-school time (OST) is a burgeoning field with both research and policy implications. Efforts to improve professional development for OST staff members are of particular interest, as funding streams increasingly target interventions which promote positive changes in student outcomes. Professional development evaluation in particular is hindered by a lack of consistency among job titles and responsibilities across OST organizations. This mixed-method study utilizes original data to explore underlying patterns of job responsibilities within the field and offers a new classification system based on exploratory factor analyses. The classification includes five categories, each with a unique combination of common job responsibilities to assist survey respondents in choosing the appropriate category: upper-level administration, mid-level administration, direct-service, capacity-building, and “other.” Results suggest this new system is user-friendly to both respondents and researchers, and will garner more accurate and comparative information for future OST research and application.

**Neighborhood Youth Centers and Families as Supportive Environments for Youth in High Risk Urban Settings**  
*Sabatelli, Ronald M.; Anderson, Stephen A.; Britner, Preston A.; Liefeld, Julie A.*

Highlights of a study which examined the relationship between contextual assets within the lives of urban, poor, minority youth, and youth adjustment are discussed in this article. The assets studied were family support and supportive involvement in neighborhood youth centers. The results indicated that higher levels of family support and youth center involvement were associated with better youth outcomes. An absence of significant interaction effects indicated that strong involvement and support in one setting did not compensate for a low level of support or involvement in the other setting. Family support was found to be the most significant predictor of youth adjustment.

**Educator Perceptions of Conflict Interactions Among Young Children in Inner-city Elementary and Middle Schools**  
*Wilburn, Victor R.; Huff, Jonathan; Belay, Getinet*

A study that investigated the perceptions of educational professionals regarding the rising issue of aggressive and disruptive behaviors among young children in inner-city schools is discussed in this article. A convenient sample of 14 professionals were selected and interviewed from educators in an inner-city located in the northeast region of Ohio. Evidence of this investigation suggests that young children’s aggressive behaviors are increasing in both occurrence and complexity. While these behaviors are perceived to be a function of certain environmental exposures, a case can be made for the effectiveness in conflict management and life skill application in young children as many children seem to display more problems in collective and social settings.

**Positive Youth Development through Civic Engagement**  
*Parker, Jennifer S.; Bauknight, Laura*

As part of the 175th anniversary celebration of Spartanburg, South Carolina, three local foundations and the United Way agreed to fund a youth leadership project. A University of South Carolina Upstate (USC Upstate) faculty member with expertise in youth development and
the coordinator of the Spartanburg Youth Council agreed to develop the project and serve as
the project directors. We developed a youth philanthropy project with expected outcomes of
positive development, increased awareness of community issues, and greater civic engagement
for the youth. A group of eighteen teens participated in the yearlong project. Interactive
workshops on topics such as community goals, grant writing, writing the request for proposals
and reviewing grants were conducted. At the culmination of the project, the young
philanthropists awarded grants totaling $12,000 to eight youth serving organizations. The teens
reported many positive developmental experiences and greater awareness of community needs
and increased responsibility to their community.

Project H.O.P.E.: Effective University Engagement with Community Afterschool
Programs [Article 090403PA002]
Jentleson, Barbara; Henderson, Elizabeth; Johnson, Denice M.
Implemented in 2002 by the Duke-Durham Neighborhood Partnership, Project H.O.P.E. has
improved the quantity and quality of afterschool programs for the youth of Durham, NC.
Project H.O.P.E. provides tutoring programs, enrichment resources, and evaluation support to
non-profit community partner organizations located in the low income Durham neighborhoods
surrounding Duke University. Duke University undergraduates who provide tutoring services to
the Durham youth in the afterschool programs gain from valuable reciprocal service learning
experiences. Project H.O.P.E. is an effective model of the mutual benefits that can be gained
from effective university and community engagement in the service of at-risk students.

Research and Evaluation Strategies
Methodological Note: On Using Personal Digital Assistants (PDAs) for Survey
Administration in the Study of Youth Development [Article 090403RS001]
Abo-Zena, Mona M.; Warren, Amy Eva Alberts; Issac, Sonia S.; Du, Dan; Phelps, Erin; Lerner,
Richard M.; Roeser, Robert W.
Applied developmental scientists face the challenge of identifying research methods that enable
the efficient collection of data from youth of diverse social backgrounds (e.g., ethnic, racial,
religious, economic) and varying levels cognitive-linguistic and attentional skills. In addition,
because access to youth during school time is often limited by educators’ desire to preserve
instructional time, finding methodologies to collect data from youth that are highly efficient, and
also those that are feasible in less structured settings, are needed. This article outlines some of
the benefits and limitations of using a voice-enhanced survey delivered on a personal digital
assistants (PDA) as a method of gathering data from diverse youth in both, in and out-of-school
contexts.

Resource Review
Coaching the Camp Coach: Leadership Development for Small Organizations
[Article 090403RR001]
Hedrick, Jason; Homan, Greg
Coaching is an important component of successful professional growth for leaders within any
organization. However, organizations with limited resources may have challenges providing
such coaching opportunities. This can be especially true for small business, non profit
organizations and summer camps. “Coaching the Camp Coach; Leadership Development for
Small Organizations” by Shelton, M. (2003) provides a framework, both in theory and practice,
for camp leaders to improve interpersonal and intrapersonal skills through self evaluation.
Accompanying the book is a CD-ROM that has multiple worksheets to be used in conjunction
with the text.
